

Making sure the gas in your home is safe

About Clanmil Housing

We are Clanmil Housing.
We own lots of homes.

You pay us money called rent to live
in one of our homes.

There are things we must do to
make sure your home is safe.

And there are things that you must
do too.

This easy read booklet tells you what
we must do and what you must do.

Gas safety check

Gas makes things like your boiler and cooker work.

It comes into your home through pipes.

If your boiler or cooker is not working, it can be very dangerous.

We will send someone to your home to do a gas safety check.

We will do the check every year.
We will tell you when it will be.

How to tell if there is a problem with your gas

There are yellow or orange flames when you use your gas cooker.

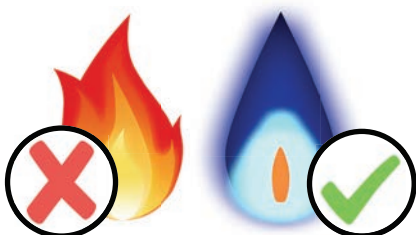

There might be black marks around your cooker or boiler.

The **pilot light** in your boiler is not on.

The **pilot light** is a small flame that you can see through a small window in your boiler.

The pilot light is yellow or orange instead of blue.

If you see any of these things, call the **Gas Emergency Service.**

You must phone them as soon as you can.
